# CHAPTER 1

---

## About

---

This library allows you to emojiify content such as:

This is a message with emojis :smile: :snake:

See the [Emoji cheat sheet](#) for a complete list of aliases.

```
>>> import emojis

>>> emojis.encode('This is a message with emojis :smile: :snake:')
'This is a message with emojis 😊 🐍'
```

If you are looking for information on a specific function this part of the documentation is for you.

## 2.1 Emojis Library

This part of the documentation covers all Emojis library functions.

### 2.1.1 Sample Code

```
>>> import emojis

>>> emojis.encode('This is a message with emojis :smile: :snake:')
'This is a message with emojis 😊 🐍'

>>> emojis.decode('This is a message with emojis 😊 🐍')
'This is a message with emojis :smile: :snake:'

>>> emojis.get('Prefix 🐍 Suffix')
{'🐍', ''}

>>> emojis.count(' 🐍 ')
4

>>> emojis.count(' 🐍 ', unique=True)
2

>>> emojis.db.get_emoji_by_alias('snake')
Emoji(aliases=['snake'], emoji='🐍', tags=[], category='Animals & Nature', unicode_
↳ version='6.0')

>>> emojis.db.get_categories()
{'Activities', 'Travel & Places', 'Smileys & Emotion', 'Symbols', 'Food & Drink',
↳ 'Animals & Nature', 'People & Body', 'Objects', 'Flags'} (continues on next page)
```

## 2.1.2 Main Functions

`emojis.encode(msg)`

Encode Emoji aliases into unicode Emoji values.

**Parameters** `msg` – String to encode.

**Return type** `str`

Usage:

```
>>> import emojis
>>> emojis.encode('This is a message with emojis :smile: :snake:')
'This is a message with emojis  '
```

`emojis.decode(msg)`

Decode unicode Emoji values into Emoji aliases.

**Parameters** `msg` – String to decode.

**Return type** `str`

Usage:

```
>>> import emojis
>>> emojis.decode('This is a message with emojis  ')
'This is a message with emojis :smile: :snake:'
```

`emojis.get(msg)`

Returns unique Emojis in the given string.

**Parameters** `msg` – String to search for Emojis.

**Return type** `set`

`emojis.count(msg, unique=False)`

Returns Emoji count in the given string.

**Parameters**

- `msg` – String to search for Emojis.
- `unique` – (optional) Boolean, return unique values only.

**Return type** `int`

## 2.1.3 Database Functions

`emojis.db.get_emoji_aliases()`

Returns all Emojis as a dict (key = alias, value = unicode).

**Return type** `dict`

`emojis.db.get_emoji_by_code(code)`

Returns Emoji by Unicode code.

**Parameters** `code` – Emoji Unicode code.

**Return type** emojis.db.Emoji

`emojis.db.get_emoji_by_alias(alias)`

Returns Emoji by alias.

**Parameters** `alias` – Emoji alias.

**Return type** emojis.db.Emoji

`emojis.db.get_emojis_by_tag(tag)`

Returns all Emojis from selected tag.

**Parameters** `tag` – Tag name to filter (case-insensitive).

**Return type** iter

`emojis.db.get_emojis_by_category(category)`

Returns all Emojis from selected category.

**Parameters** `tag` – Category name to filter (case-insensitive).

**Return type** iter

`emojis.db.get_tags()`

Returns all tags available.

**Return type** set

`emojis.db.get_categories()`

Returns all categories available.

**Return type** set

## CHAPTER 3

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`

### e

`emojis`, 4  
`emojis.db`, 4

### C

`count()` (*in module emojis*), 4

### D

`decode()` (*in module emojis*), 4

### E

`emojis` (*module*), 4

`emojis.db` (*module*), 4

`encode()` (*in module emojis*), 4

### G

`get()` (*in module emojis*), 4

`get_categories()` (*in module emojis.db*), 5

`get_emoji_aliases()` (*in module emojis.db*), 4

`get_emoji_by_alias()` (*in module emojis.db*), 5

`get_emoji_by_code()` (*in module emojis.db*), 4

`get_emojis_by_category()` (*in module emojis.db*), 5

`get_emojis_by_tag()` (*in module emojis.db*), 5

`get_tags()` (*in module emojis.db*), 5
